## SKILLS

- Programming with Javascript, HTML and CSS
- Express and NodeJS
- Advanced knowledge of React and Redux
- Knowledge of PostgreSQL and Sequelize
- Quick learning of new technologies
- Discipline and teamwork
- Working with GitHub

## ACADEMIC EXPERIENCE

### Recipe Web application based on the Spoonacular.com API

FEBRUARY 2021

- Realization of a web application with React (Single page application) that makes asynchronous requests to the spoonacular.com API from the backend of the application.
- The application searches for recipes by name in the API and returns all positive results.
- It uses Redux to store the state globally and allow access from it to the search results.
- It uses sorting algorithms that work with the global status and sort the recipes alphabetically in ascending and descending order, and also sorts the recipes according to their score.
- The application allows you to create your own recipes using a form, which are saved in a database and included in the search results (PostgreSQL, Sequelize and Express).
- The application displays the selected recipe and its particular details.
- Use of pure CSS for styling.

## TRAINING

---

### HENRY

Full Stack Developer  
(2021)
